

LEED The Way With

Skyfold is pleased to be an official member of the U.S. Green Building Council. The Green Council is committed to promoting better designed buildings that not only are more environmentally and socially responsible, but help improve the quality of life for the people that occupy them and the communities in which they are built.

The council has developed a benchmarking system known as LEED. (Leadership in Energy & Environmental Design). It has several categories and is used in evaluating the appropriateness of specific projects via a point system.

The Skyfold custom powerlift partitions are constructed mainly from recycled materials which offer tremendous advantages and opportunities to earn points required for LEED certification.

When it comes to recycled material content, architects and owners that chose a Skyfold product can calculate the following toward LEED accreditation on their projects:

	<u>Skyfold Classic</u>	<u>Skyfold Mirage</u>	<u>Skyfold Eclipse</u>
Recycled materials	95%	97%	93%
Post-consumer	27%	20%	27%
Pre-consumer	50%	29%	49%

In order to continue to protect our environment, it is essential we all do our part by using recycled material whenever possible. Skyfold is proud to help.
