

INDEPENDENT ACOUSTIC VERIFICATION OF STYLE'S MOVEABLE WALL SOLUTIONS

STYLE

Following the launch of the FIS Acoustic Verification Scheme, Style is proud to have 26 moveable wall products tested and approved, confirming its position as the UK market leader. The FIS Acoustic Verification Scheme was created to enable members to verify acoustic tests against an agreed criterion and a methodology to present these to market in a consistent and transparent manner. FIS teamed up with Cundall Acoustics to develop an acoustic test certificate verification scheme. The scheme takes test reports and assessments and runs a series of checks to verify the certificates are genuine. "At Style, we have always taken great pride in the acoustic integrity of our moveable wall solutions," said Mike Fine, Style's Director for the Midlands. "At long last, we now have independent evidence to support our acoustic ratings, with more products tested and verified than anyone else in the UK operable wall sector."
