

## Sports hall space maximised with Style moveable wall

The large sports hall in the new £22.5m Whitwick and Coalville Leisure Centre offers considerable functionality thanks to a Dorma Hüppe Variflex moveable wall installed by partitioning experts, Style.

Featuring semi-automatic operation with an impressive 59dB acoustic barrier between divided areas, the wall allows the hall to be quickly separated into two dance and fitness studios or opened-up to accommodate activities requiring the entire area.

Ensuring a long-term return on investment, the Variflex panels are manufactured separately from the frame, allowing individual ones to be easily changed if they become damaged. This represents a highly cost-effective solution, compared to having

the entire moveable wall replaced, and is an essential feature for a busy facility like this where a wide variety of sports are being enjoyed.

Working with architect, GT3 and contractor, Metnor Construction, Style advised installing the Dorma Variflex moveable wall, effectively increasing the useability of the sports hall, allowing the space to be rapidly adapted to meet the varied demands. Finished in a contemporary pearly grey laminate, the Variflex benefits from semi-automatic operation which means, once the wall has been moved into position, the acoustic seals are applied to the perfect pressure every time without the need for manual intervention.
